

Get Your Attic Together!

Installs Easily with No Measuring or Cutting!

Patent Pending

The **only** storage system designed for unfinished attic space over a garage or under a roof.

Warning! Weight must not exceed 250 lbs. per panel or the load limit of the structure. Do not place directly on wires or cables.

1. Choose the correct size Attic Dek panel for your installation. The size is determined by the width, on center, between the joist in your attic, either 16" Or 24".
2. Determine the layout for your installation. Panels can be placed in a row or side-by-side or in any configuration you desire. Some users install the panels in a stepping stone configuration to gain access to areas where the panels are installed in continuous rows.
3. Place the panel tabs on center between the joists.
4. Screw into place to secure, using a power screwdriver.
